

SABBIR AHMED

Product Engineer • Zero-to-Launch • AI-Agent Orchestration

Dhaka, Bangladesh • +880 1400 378361 • sabbirahmed8361@gmail.com • github.com/thesabbir • linkedin.com/in/sabbirahm

SUMMARY

Product engineer who takes things zero-to-launch — and now ships at team-scale by directing AI agents. 10+ years building products end to end across Norway, the US, UAE, and Finland, including a founding role through acquisition and a CTO seat. I care about outcomes, not architecture for its own sake: I design just enough system to move fast and keep it correct. Currently founding a stealth venture solo, orchestrating fleets of AI coding agents to build a real product the way a team used to.

EXPERIENCE

Stealth — Founder & Product Engineer

Remote • Feb 2026 – Present

Building and shipping a product solo, at a scope that used to need a team.

- Building a multi-tenant commerce product from zero, solo — by orchestrating fleets of AI coding agents under guardrails I designed to keep them honest.
- Direct the agents end to end: decide what to build, set the rules, let them do the volume while automated checks and tests catch regressions — one campaign shipped a ~30k-LOC change across a 22-branch chain.
- Designed just enough system to stay fast and correct under many non-deterministic agents editing at once (event-sourced backend, multi-tenant isolation, Rust core, TypeScript SDK).

Cefalo — Staff / Lead Engineer (Consultant)

Dhaka, BD (Norway clients) • Nov 2023 – Feb 2026

Embedded engineering consultant for Norway-based SaaS clients — built growth features and shaped how their systems scaled.

- Built **growth features** for a **multi-tenant subscription-management platform**, contributing to its growth from **1 client and ~2k users to 300k+ users across 10–15 tenants**.
- Advised on **system scaling and architecture** — made trade-off calls that kept the platform fast and reliable through that growth.
- Mentored **2 engineers** and advised **3 other consultants** on architecture decisions for their own clients — a go-to for hard design calls across the team.

Ngaze — Lead Engineer / CTO

Remote, New York • Mar 2023 – Oct 2023

Founding technical leader for a gamified, multi-tenant STEM learning platform.

- Shipped an **AI/LLM-powered course-authoring tool** that let non-engineers generate interactive lessons — including hosted Unity/Blender physics simulations — building LLM product features before it was mainstream.
- Architected the platform as **multi-tenant SaaS with a partner model** (live with 2 partners) and took it from idea to working product as CTO — owned the stack, technical strategy, and hiring.

Fasset — Senior Software Engineer

Remote, Dubai, UAE • Aug 2021 – Mar 2023

Early engineer on a regulated crypto exchange — joined when the infrastructure was struggling and rebuilt it to scale.

- Diagnosed a struggling early-stage infrastructure and **cut core-service cost 50%** through caching, optimization, and a service-oriented redesign — laying foundations the platform later scaled on (now serving millions of users).
- Shipped the **P2P exchange launch** and core trading APIs for emerging-market users.

BAIA Group — Product Consultant (Contract)

Remote, Helsinki, FI • Jun 2020 – Aug 2021

- Built and shipped a logistics tracing-and-verification web app end to end for supply-chain security — designed for low-trust environments and optimized for 2G/3G connectivity.

Shohoz — Senior Software Engineer

Dhaka, BD • May 2019 – Jun 2020

- As an individual contributor inside the Shohoz super-app: brought **food delivery to web** and **launched truck rental across app and web**; modernized the legacy frontends to React/Redux.

Cookups — Founding / Lead Engineer

Dhaka, BD • Feb 2017 – May 2019

Founding engineer at a home-cook marketplace — built to acquisition by Chaldal.

- Built and shipped the **food-delivery app** (web, iOS, Android from one React / React Native codebase) and the **back-office system** that ran operations.
- **Hired and managed a team of 4 engineers**, leading the product to acquisition by **Chaldal** (chaldal.com).

East West Media Group — Software Engineer / Team Lead

Dhaka, BD • 2016 – 2017

- Built a real-time messaging web app (WebRTC video calls, file transfer, screen sharing) in React/Redux and **led a team of 6 engineers**.

TECHNICAL SKILLS

AI & Agentic	AI-agent orchestration, LLM application development, OpenAI / LangChain, agent-driven delivery workflows
Product	Zero-to-launch delivery, end-to-end ownership, roadmap & trade-off calls, cross-platform (web / iOS / Android)
Languages	TypeScript, JavaScript, Rust
Frontend	React, Next.js, React Native, Redux, Tailwind
Backend	Node.js (NestJS, Express)
Data	PostgreSQL, MongoDB, Redis
Cloud & Infra	Linux, AWS (ECS, RDS, S3, CloudFront), GCP, Vercel, Kubernetes, Docker, Cloudflare, GitHub Actions

EDUCATION

B.Sc. in Computer Science • University of Information Technology and Sciences — Dhaka, BD
